\*\*Response factor is based upon the number of firefighters needed to deliver the required fireflow. A base residential response force is 16 firefighters on scene. When a residential property needs more than 16 firefighters to deliver the calculated fire flow, that number is auto calculated using the adopted formula and 50 gallons per minute fire flow delivery per firefighter on scene up to 3,599 square feet and 48 gallons per minute for homes greater than 3,599 square feet

**FORMULA: 400-3599(SQ.RT X 18)/50 = FIREFLOW/16 = RESPONSE FACTOR.....>3599(SQ.RT X 18)/48 = FIREFLOW/16 = RESPONSE FACTOR**

\*\*\* Risk factors apply to commercial property and are defined by the National Fire Protection Association and deal with fire hazards and hazardous materials.

Hazard factors based On NFPA-13

Automatic Fire Alarm system discounts are only available for comm & apartment / multi fam prop types
